

WHERE'S THE WARMING?

“It’s a complicated relationship, but the most important part of it is this: When there is more CO₂ in the atmosphere, the temperature increases because more heat from the Sun is trapped inside.

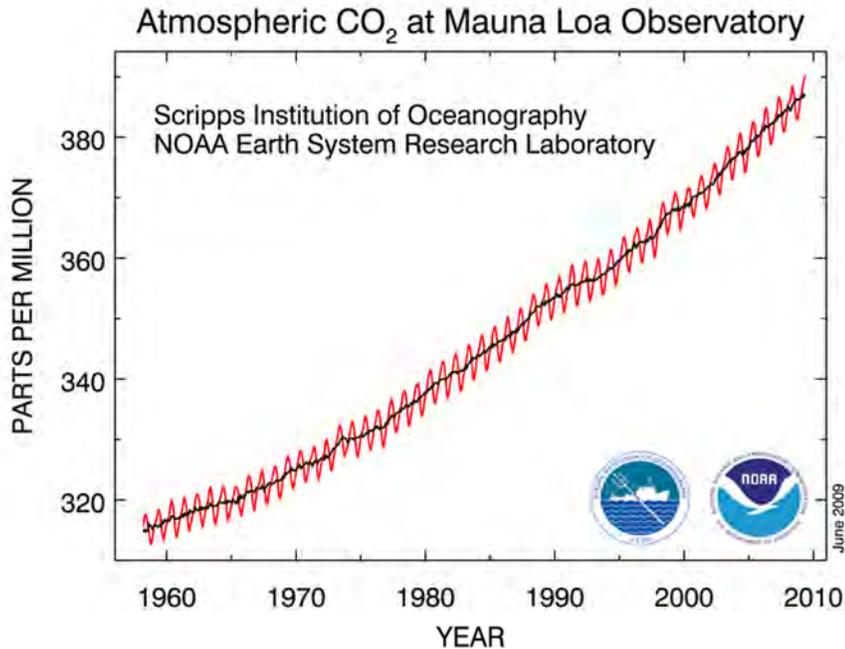

....

“And in recent years the rate of increase has been accelerating.”

Al Gore, *An Inconvenient Truth* 67-72 (2006).

Carbon dioxide in the atmosphere has been increasing

http://www.esrl.noaa.gov/gmd/ccgg/trends/co2_data_mlo.html

But there’s been no warming over the last decade
